

MobileWorks

Reduce Healthcare & Workers' Compensation Costs. Improve Worker Health & Productivity.

MobileWorks is an innovative, affordable, quick start program for employers to help employees with soreness or discomfort while working. A licensed therapist comes to the jobsite and provides care under OSHA first aid guidelines. During the onsite visit, a simple exam will be performed while discussing the employee's work tasks and concerns. Additionally, the employee will receive customized education regarding modification of work tasks, body mechanics, recommendations for home care and ongoing follow up to ensure the employee is improving.

Early reporting and intervention using MobileWorks services keeps the employee at work and productive. It can also help reduce injury, recordables, lost time and workers' compensation costs.

Interventions utilized, under OSHA guidelines 1904.7(b)(5):

- Massage/soft tissue work
- Non-rigid tape (Rock Tape or KTape)
- BioFreeze, or other soreness-relieving gel
- Stretches for health
- Education, coaching, and job task modifications
